**Problem: WHAT ARE BASIC NEEDS FOR A PRECASTER STARTING PRODUCTION OF PRECAST PRODUCTS?**

Production of precast products is a complicated process mastered by many entrepreneurs. The requirements break down into four "basic needs":

I. Forms with desired shape are necessary to hold wet concrete until it becomes solid.

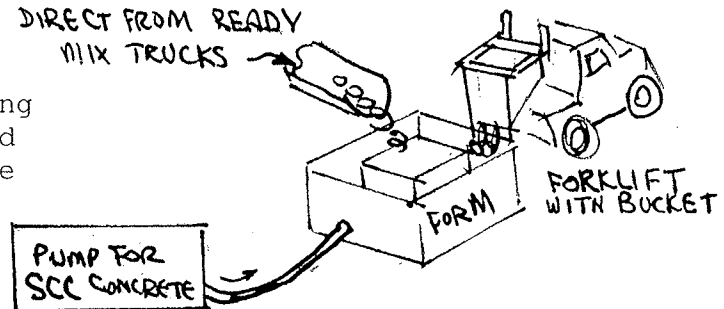

II. A concrete with desired qualities is necessary as basic material to fill the forms and create the product.

III. A method of conveying the wet concrete and depositing it in the form.

DIRECT FROM READY MIX TRUCKS

IV. A method of removing the hard concrete from the form and transporting it to a storage area.
